BUSINESS REQUIREMENTS DOCUMENT

QuickMart Sales and Stock System

Prepared by: Prabodha Fernando

Date: 2 November 2026

Version: 1.0

Status: Final

Note: QuickMart is a fictional business created for learning and portfolio purposes.

1. INTRODUCTION

1.1 Purpose of this document

This Business Requirements Document (BRD) describes the business needs and requirements for the QuickMart Sales and Stock System. It explains the problem, the objectives, the scope, and what the system must do. It is written for the shop owner, the staff who will use the system, and the team that will build it.

1.2 Background

QuickMart is a small neighborhood shop with one owner and three staff members. At present, all sales and stock are recorded by hand in a paper notebook. This causes frequent mistakes, makes it hard to know when items are running low, and takes the owner about an hour every evening to total the day's sales.

The owner would like to replace the notebook with a simple system that records sales and stock automatically and produces a daily report.

2. PROBLEM STATEMENT

QuickMart records all sales and stock in a paper notebook. This causes the following problems:

- Mistakes are common when writing and adding up sales.
- The owner cannot easily tell when an item is running low, so items sometimes run out.
- Totaling the day's sales takes the owner about an hour every evening.
- There is no quick way to look back at past sales.

The owner needs a simple system that tracks sales and stock automatically and produces a daily report.

3. BUSINESS OBJECTIVES

The new system should achieve the following objectives:

1. Reduce the time spent totaling daily sales from 1 hour to under 10 minutes.
2. Reduce recording mistakes in sales and stock.
3. Alert the owner when items are running low.

4. SCOPE

4.1 In scope

- Recording sales and calculating the total bill
- Managing stock (adding, updating and deleting items)
- Automatic stock reduction after each sale
- Low-stock warnings
- Daily sales report and sales by date range
- User login with a username and password

4.2 Out of scope

- Online ordering
- Customer loyalty program
- Accounting and payroll

5. STAKEHOLDERS

Stakeholder	Role	What they need
Shop owner	Decision maker, main user	Daily sales report, low-stock alerts
Cashier	Daily user	Fast, simple sales entry
Stock keeper	Daily user	Easy way to add and update stock
Customers	Indirect	Short waiting time, correct bills
Suppliers	Indirect	Clear, timely reorders

6. FUNCTIONAL REQUIREMENTS

These describe what the system must do. Priority shows how important each requirement is.

ID	Requirement	Priority
FR1	Users must log in with a username and password	High
FR2	The system must let the stock keeper add, update, and delete items	High
FR3	The system must let the cashier record a sale and calculate the total bill	High
FR4	The system must reduce stock automatically after each sale	High
FR5	The system must show a low-stock warning when an item falls below a set level	High
FR6	The system must produce a daily sales report for the owner	High
FR7	The system should let the owner view sales by date range	Medium
FR8	The system should record supplier details for each item	Low

7. NON-FUNCTIONAL REQUIREMENTS

These describe how well the system must work, such as speed, security and ease of use.

ID	Category	Requirement
NFR1	Performance	Recording a sale should take less than 30 seconds
NFR2	Security	Only authorized users can access the system
NFR3	Reliability	Data must be backed up daily
NFR4	Usability	Staff should be able to learn the system in under one hour

8. ASSUMPTIONS AND CONSTRAINTS

8.1 Assumptions

- The shop has at least one computer or a tablet for the system.
- The staff can use basic computer functions such as typing and clicking.
- The shop has a stable power supply, and the equipment is available during opening hours.
- The owner will provide the details of items, prices, and low-stock levels.

8.2 Constraints

- The budget is small, because QuickMart is a small shop.
- The system must be simple enough for staff to learn in under one hour.
- The system should be ready for use within three months.
- Online ordering, loyalty programs, accounting, and payroll are not included (see Section 4.2).

9. USER STORIES

The user stories describe each requirement from the point of view of the person who uses the system. The full list, with acceptance criteria, is in the file User-Stories.xlsx in the project repository.

ID	As a...	I want to...	So that...	Linked req.	Priority
US1	User	log in with my username and password	only authorized people can use the system	FR1, NFR2	High
US2	Stock keeper	add, update and delete items	the stock list is always correct	FR2	High
US3	Cashier	record a sale and see the total bill	I can serve customers quickly and correctly	FR3	High
US4	Shop owner	have stock reduced automatically after each sale	I don’t need to update the notebook by hand	FR4	High
US5	Shop owner	see a warning when an item is running low	I can reorder before it runs out	FR5	High
US6	Shop owner	view a daily sales report	I can finish my evening totals in minutes	FR6	High
US7	Shop owner	view sales for a date range	I can compare weeks and months	FR7	Medium
US8	Stock keeper	save supplier details for each item	I know who to contact when reordering	FR8	Low
